

2023 | 2024

A skier is shown in a dynamic pose, carving a turn on a snowy slope. The skier is wearing a light-colored jacket and dark pants, and is kicking up a spray of snow. The background features a vast, snow-covered mountain range under a clear blue sky. The sun is visible in the upper left corner, creating a bright glow and casting long shadows across the snow. The overall scene conveys a sense of speed and adventure in a winter sports setting.

OUR LOVE OF THE SPORT

REMAINS A STEADFAST
INSPIRATION IN EVERY
COLLECTION.

ENJOY PRICELESS
MOMENTS ON THE SLOPES WITH
FISCHERS' EXCELLENT, HIGH-
PERFORMANCE SKI CLOTHING

F U T U R E

THE FUTURE IS NOW. PUSH PAST YOUR LIMITS, REACH NEW LEVELS OF PERFORMANCE AND REDISCOVER YOUR PASSION FOR THE SPORT.

FABRICS

Evotexx

This stretchable polyester fabric assures maximum comfort and a great range of movement. The stretchable, Smart fabric membrane guarantees high-performance, in addition to providing waterproof and breathability functions.

Look and feel your best on the slopes with breathable, durable and wind-proof garments made for extreme weather conditions. Evotexx's features make it ideal for snowy or rainy days, as well as for end-of-season warmer days.

Evotexx 3L

This fabric consists of three layers: an external polyester layer, an internal water-resistant laminated membrane and an internal layer. The lamination assures a water resistance of 20.000 mm water column and at the same time keeps breathability of 20.000 g/m²/24h, making it possible to produce technical garments suitable for even the worst conditions.

Microtherm

This thin, lightweight padding offers excellent thermal insulation with technical and waterproof materials. This microfiber padding is soft, warm, and is extremely durable in harsh weather conditions, as well as in the wash.

Microtherm is a slimming, lightweight material that also offers a high heat insulation. Additionally, thermo ball wadding products are soft to the touch, comfortable to wear and allow freedom of movement.

ACTIVE DRY

Active Dry is ideal for extreme weather conditions. The material does not bind or soak in moisture, making it dry quickly. The Active Dry technology is used in many layering garments, technical shirts, technical pants and lining fabrics.

Active Dry materials in underwear and layering garments:

The Active Dry Cool series was created for all conditions. These products are worn as the bottom layer and protect the skin from harsh outdoor elements while adding a layer of warmth, keeping you comfortable and optimizing your performance.
